Lecture program

October 29  Opening, oral scientific session

13:30-15:05 Opening & Spintronics and Computational Materials Science  Chair: M. Fujita

Welcome Address  K. Takanashi

I1 Bose-Einstein Condensation of Magnons by Instant Cooling
   B. Hillebrands, TU Kaiserslautern ................................................................. 11

C2 Spintronics and Spin-Caloritronics in Ordered-Alloy Systems
   K. Takanashi, IMR .......................................................................................... 12

C3 Theoretical Spintronics at the IMR
   G. E. W. Bauer, IMR .................................................................................... 13

C4 Multi-Physics Simulation on Fracture and Wear Processes with Chemical Reactions
   M. Kubo, IMR .............................................................................................. 14

15:25-17:05 Materials for Energy  Chair: G. E. W. Bauer

I5 Storage of Renewable Energy by Hydrogen and Reduction of CO₂
   A. Züttel, EPFL SB ISIC LMER ................................................................. 15

I6 Defects in Kyropoulos Ti-Doped Sapphire for Laser Applications
   T. Duffar, Grenoble INP ........................................................................... 16

C7 Complex Hydrides for Energy Device Research
   S. Orimo, IMR ............................................................................................ 18

C8 Design, Crystal Growth, Scintillation Properties and Social Implementation of Ce Doped
   Gd₃(Ga,Al)₅O₁₂ Single Crystal
   A. Yoshikawa, IMR ...................................................................................... 19
October 30  Oral & poster scientific sessions

9:00-10:30 Materials for Infrastructure and Analytical Science  Chair: H. Kato

I9  Effect of B2 Morphology on the Mechanical Properties of Dispersion Strengthened Lightweight Steels  
    N.-J. Kim, POSTECH .............................................................. 21

C10  Recent Research Activities in Deformation Processing  
    A. Chiba, IMR ................................................................. 22

C11  Light Element Strategy in Advanced High-Strength Low-Alloy Steels  
    T. Furuhara, IMR .............................................................. 23

C12  TEM and STEM: How We Can Make Most of Them?  
    - Some Application to Metallic Systems for Infrastructure-  
    T. J. Konno, IMR .............................................................. 24

10:50-12:20 Materials Physics, Chemistry and Electronics  Chair: D. Aoki

I13  When Spin-Orbit Coupling Meets with Electron Correlations  
    H. Takagi, MPI for Solid State Research ............................... 25

C14  Emergent Phenomena at Thin Film Heterostructures  
    A. Tsukazaki, IMR .............................................................. 26

C15  $\pi$-Electron Physics in Organic Molecular Materials  
    T. Sasaki, IMR ................................................................. 27

C16  Porous Magnets for Gas Sensing  
    H. Miyasaka, IMR .............................................................. 28

13:40-15:10 Collaborating Research Facilities  
(Nuclear Engineering/High Magnetic field/Quantum Beam/Industry)  Chair: S. Awaji

I17  Reinforcing Safety of Nuclear Installations through Collaborative Research in Science and Technology  
    E. van Walle, SCK-CEN/KU Leuven ....................................... 29

C18  Research Activity on Irradiation Effects in Nuclear Materials and Actinide Science at International Research Center for Nuclear Materials Science  
    Y. Nagai, IMR .................................................................. 30

C19  Recent Activities on Research in High Magnetic Fields  
    H. Nojiri, IMR .................................................................. 31

C20  Industry-Academia-Government Collaboration Activities in Trans-Regional Corporation Center  
    N. Masahashi, IMR .............................................................. 32
15:30-17:00 Poster Session

P1 Magnetic and Magnetocaloric Properties in Metamagnetic Shape Memory Alloys NiCoMnGa and NiCoMnIn
   T. Kihara, IMR ................................................................. 33

P2 Influence of gas environment and thermal heating on atomic structures of platinum nanoparticle catalysts of proton-exchange membrane fuel cells
   K. Yoshida, IMR ............................................................. 34

P3 Fabrication of \((\text{Na}_{0.98}\text{Ca}_{0.02})(\text{Nb}_{0.98}\text{Zr}_{0.02})\text{O}_3\) thin films and their characterization
   S. Suzuki, IMR ............................................................... 35

P4 Correlation between dispersion of VC interphase precipitation and local hardness of ferrite in low carbon steels
   Y.-J. Zhang, IMR ............................................................. 36

P5 Compositional evolution of Ni-based superalloys during creep by atom probe tomography
   K. Inoue, IMR ................................................................. 37

P6 Flexible magnetic sensor based on simple Fe-Sn alloy films
   K. Fujiwara, IMR ............................................................ 38

P7 In-situ observation of facet formation during solidification of pure antimony
   K. Shiga, IMR ................................................................. 39

P8 Magnetotransport properties in the noncentrosymmetric itinerant ferromagnet \(\text{Cr}_{11}\text{Ge}_{19}\)
   N. Jiang, Department of Basic Science, University of Tokyo ........................................ 40

P9 Atom probe study of impurity distribution at Si/GaAs heterointerfaces fabricated by surface-activated bonding
   Y. Shimizu, IMR ............................................................. 41

P10 Visualization of thermo-magnetic effect in a ferromagnetic FePt thin film
   T. Seki, IMR ................................................................. 42

P11 Numerical study of anomalous transport in Kagome lattice
   M. Takagaki, IMR .......................................................... 43

P12 An oxide as conductive as gold: \(\text{PdCoO}_2\) with graphene-like 2D Pd sheets
   T. Harada, IMR ............................................................. 44

P13 Large anomalous Hall conductance in magnetic topological insulator Fe doped \((\text{Bi}_{1-x}\text{Sb}_x)_2\text{Se}_3\) thin films
   Y. Satake, IMR ............................................................. 45

P14 Spin-orbit interaction investigated by weak anti-localization in perovskite \(\text{BaSn}_{1.3}\text{Pb}_0.7\text{O}_3\) thin films
   J. Shiogai, IMR ............................................................. 46

P15 Pulsed-laser deposition of layered InSe thin films for investigation of thickness-dependent bandgap modification
   D. Zheng, IMR ............................................................. 47
P16 An approach to improve the corrosion resistance of FeCrWC alloy in sulfuric acid with trace Cu modification
C. Zhang, IMR ................................................................. 48

P17 Regulating the coarsening of the $\gamma'$ phase in a novel high entropy superalloy
H. Bian, IMR ................................................................. 49

P18 Helicity-protected domain-wall magnetoresistance in disordered Weyl semimetals
K. Kobayashi, IMR .......................................................... 50

P19 Study on Mechanical Properties and Microstructure of Several Refractory High-Entropy Alloys
C. Yang, IMR ................................................................. 51

P20 Study on the interface potential distribution during growth of MgO-doped lithium niobate under an external electric field
Q. Shi, IMR ................................................................. 52

P21 Magnetic control of mechanical vibrations of a Y$_3$Fe$_5$O$_{12}$ micro bridge and theoretical analysis based on magnetoelastic coupling
H. Arisawa, IMR ............................................................ 53

P22 Surface acoustic wave on natural and artificial multiferroics
R. Sasaki, Department of Basic Science, University of Tokyo ................................. 54

P23 Microwave nonreciprocity and magnetoacoustic effect in magnets
Y. Nii, IMR ................................................................. 55

P24 Precipitation behavior of alloy nitrides during the tempering of Fe-N martensitic steels
S.-W. Young, IMR .......................................................... 56

P25 Effects of Ti addition on surface hardening behavior in plasma-nitrided Fe-2Al alloys
M. Zhu, IMR ................................................................. 57

P26 Muon spin relaxation study on magnetism in T'-'type La$_{1-x/2}$Eu$_{1-x/2}$Sr$_x$CuO$_4$
S. Asano, IMR ........................................................... 58

P27 Spin Seebeck effect in two-dimensional ferromagnets CrSiTe$_3$ and CrGeTe$_3$
N. Ito, IMR ................................................................. 59

P28 Regulating twin boundary mobility in magnesium and its alloys
Y. Cui, IMR ................................................................. 60

P29 Lithium distribution measurement in electrodes of lithium-ion battery by laser-induced breakdown spectroscopy
S. Imashuku, IMR .......................................................... 61

P30 Influence of dealloying media metal on microstructure and properties of porous product by liquid metal dealloying
W.-Y. Park, IMR ............................................................ 62

P31 Fabrication of Cu-Ti alloy wire with high strength and high electrical conductivity
Y. Kadoi, IMR ............................................................. 63

P32 Metal-Insulator Transition and Magnetocapacitance Effect in a "(BEDT-TTF)$_2$Rb$_{1.2}$Co(SCN)$_4$
S. Iguchi, IMR ............................................................ 64
P33 Hydrogen release reaction of a complex transition metal hydride  
T. Aoki, IMR .......................................................... 65

P34 Wavevector modulation of spin waves at a sample edge via magneto-elastic coupling  
T. Hioki, IMR .......................................................... 66

P35 Effect of interaction between particles and substrate on nucleation rate of two-dimensional colloidal crystals  
S. Guo, IMR .......................................................... 67

P36 Oxygen Diffusion in Zirconia  
T. Schabitzki, IMR .......................................................... 68

P37 Solitons in one-dimensional mechanical linkage  
K. Sato, IMR .......................................................... 69

P38 Superior radiation resistance of ODS-Cu alloy  
Y. Liu, IMR .......................................................... 70

P39 Effect of thickness of PbTiO$_3$ epitaxial thin films on crystallinity and microstructure prepared by chemical solution deposition  
T. Shimizu, IMR .......................................................... 71

P40 Ferromagnetic Weyl semimetal phase and anomalous Hall effect in stacked Kagome lattice  
A. Ozawa, IMR .......................................................... 72

P41 Anomalous magnetic behavior observed from muon spin rotation in $R_2$CuO$_4$ ($R = \text{Eu, Nd}$)  
K. M. Suzuki, IMR .......................................................... 73

P42 A structure analysis of complex precipitates in Al-Li-Cu-Mg alloys  
H. C. Lee, IMR .......................................................... 74

P43 CPP-GMR devices using $\text{C}1_b$-type half Heusler alloys  
Z. Wen, IMR .......................................................... 75

P44 Solid and liquid phases of Al-Cu alloys by Monte Carlo/Molecular dynamics (MC/MD) simulations  
S. K. Deb Nath, IMR .......................................................... 76

P45 Spin-wave refraction at magnetic domain wall  
R. Tsuboi, IMR .......................................................... 77

P46 Growth of FeNiN films and formation of $L1_0$-ordered FeNi films by denitriding  
K. Ito, IMR .......................................................... 78

P47 Step kinetics dependent on the kink generation mode in colloidal crystal growth  
J. Nozawa, IMR .......................................................... 79

P48 Bulk amorphous Si produced from supercooled liquid Si  
J. Okada, IMR .......................................................... 80

P49 Synthesis of closo-type complex hydrides incorporating multiple closo-type complex anions and their lithium-ion conductivity  
N. Toyama, IMR .......................................................... 81
P50 Carrier Density Dependence of Upper Critical Field Enhanced by Spin-Orbit Interaction in Ion-gated SrTiO$_3$

T. Ouchi, IMR ................................................................. 82

P51 Phononic Thermal Hall effect

Y. Hirokane, Department of Basic Science, Tokyo University ................................. 83

P52 Current Status of the Commissioning on the Polarized Neutron Spectrometer POLANO

Y. Ikeda, IMR ................................................................. 84

P53 Positron Annihilation Study on a neutron-irradiated RPV steel: TEM-invisible ultra-fine defects

T. Toyama, IMR ................................................................. 85

P54 The formation of small-angle grain boundaries through dislocation aggregation during directional solidification in multicrystalline silicon

L.-C. Chuang, IMR ................................................................. 86

P55 Comprehensive $H$-$T$ Phase Diagrams in Highly Crystalline 2D Superconductors

T. Nojima, IMR ................................................................. 87

P56 Measurement of Toxicity CoCrMo Alloys from EBM fabricated in Inflammation Artificial Blood Plasma

Y. Setiyorini, IMR ................................................................. 88

P57 Superconductivity and Non-Fermi-Liquid Behavior in U$_{1.8}$Th$_4$Be$_{13}$

Y. Shimizu, IMR ................................................................. 89

P58 Study of Single Crystal Growth and Electronic States of Thorium Compounds

A. Nakamura, IMR ................................................................. 90

P59 Orientation relationship during liquid metal dealloying from FCC FeCoNi precursor to BCC FeCo ligament at low temperature

S.-H. Joo, IMR ................................................................. 91

P60 Observation of 2D weak localization effects in PEDOT:PSS films

K. Itoh, IMR ................................................................. 92

P61 Chiral Symmetry Breaking in NaClO$_3$ Chiral Crystallization Achieved by Thermoplasmonic Micro-Stirring

H. Niinomi, IMR ................................................................. 93

P62 Development of all-solid-state lithium-sulfur batteries using a sulfur electrode and a LiBH$_4$-LiI solid electrolyte

R. Yoshida, IMR ................................................................. 94

P63 Analysis on inhomogeneous microstructure evolution in in-situ transmission electron microscopy and proposal for reliable use

Y. Ikeda, IMR ................................................................. 95

P64 Integration of “specialized educational science lectures” and “training of human skills and transferable skills” in computational materials science

- Case of Professional development Consortium for Computational Materials Scientists-

Y. Terada, IMR ................................................................. 96
P65 Thermally Induced Valence Tautomeric Transition in a Two-Dimensional Fe-Tetraoxolene Honeycomb Network
   J. Chen, IMR .......................................................... 97

P66 Deformation-induced hydrogen evolution behavior of SUS 304
   H. Furihata, IMR ....................................................... 98

P67 Time-temperature-transformation diagram of strongly correlated electrons in a geometrically-frustrated charge-ordered organic system
   K. Hashimoto, IMR .................................................... 99

P68 Observation of Magneto-chiral Dichroism in 1D Cu²⁺Cr³⁺ Complexes with Chiral Cyclohexanediamine Ligands
   S. Kishiue, IMR .......................................................... 100

P69 Gas Adsorption Properties of Quasi-3D Molecule-Based Magnets with a π-Stacked Pillared Layer Framework
   K. Nagano, IMR ........................................................ 101

P70 Tensile deformation behavior of additively manufactured Ti-6Al-4V alloy studied by in-situ synchrotron X-ray diffraction
   K. Yamanaka, IMR ..................................................... 102

P71 Pinning Phenomena of Superconducting Transition Temperature in YBa₂Cu₃O₇ Thin Films
   H. Liang, IMR .......................................................... 103

P72 Peculiar magnetism of non-centrosymmetric compound UlrSi₃
   F. Honda, IMR .......................................................... 104

P73 Controlling excitonic instability of interacting 2D massless Dirac fermions in a layered organic salt
   M. Hirata, IMR .......................................................... 105

P74 Facilitating solid-phase diffusion of multivalent ions utilizing concerted interactions in dual-ion battery systems
   H. Li, IMR .............................................................. 106

P75 Single crystal growth of uranium-based pnictides and chalcogenides by chemical transport method
   K. Kitabayashi, IMR .................................................. 107

P76 Superconducting properties and peculiar angular dependence of upper critical field in CeIr₃ single crystal
   Y. J. Sato, IMR .......................................................... 108

P77 Molecular Dynamics Simulation Study on Tribolayer Formation of Silicon-Based Ceramics in Water Lubrication System
   Y. Ootani, IMR .......................................................... 109

P78 Large-Scale Reactive Molecular Dynamics Analysis for the Intergranular Stress Corrosion Cracking Mechanism on Titanium under Water Environment
   N. Miyazaki, IMR ...................................................... 110
